

GRASS SEED MIXTURES 2002

GREEN DIAMOND LEA

2.92 kg CORNWALL PRG
2.70 kg UMBRIA PRG
2.28 kg MILLENNIUM (T) PRG
1.81 kg CASHEL PRG
1.36 kg MAGICIAN (T) PRG
0.68 kg WHITE CLOVER
BLEND

11.75 kg / ac

Designed to suit the widest range of soil types and management.

- Gives good early spring production. Early grass is the best and cheapest Spring feed.
- A very versatile sward. Can be used to give early grazing, closed for a big silage cut if desired, and will give good grazing all season into late autumn.
- High quality palatable sward from early spring to late autumn.

BLUE DIAMOND LEA

Intensive Grazing

3.63 kg CORNWALL PRG
3.18 kg MILLENNIUM (T) PRG
1.57 kg PORTSTEWART PRG
1.33 kg UMBRIA PRG
1.36 kg CONDESA (T) PRG
0.68 kg WHITE CLOVER
BLEND

11.75 kg / ac

- Millennium tetraploid ryegrass has the highest leaf to stem ratio. More leaf means better quality and better animal performance.
- Based on the most recent findings from Teagasc Moorepark, showing that late heading leafy perennials give improved milk yield and higher quality milk.
- Produces good grass for early bite in Spring. It has rapid recovery after grazing.
- Excellent persistency and gives a very dense sward which will stand up well to the pressures of extended grazing.

In the event of a variety not being available, we reserve the right to include the best alternative. The actual mixture will be shown on the label.

DIAMOND LEA GRASS SEED MIXTURES

- Recent research at Teagasc, Moorepark has shown that leafy grasses give better animal performance than more stemmy types. For grazing mixtures late heading leafy types of perennial ryegrass gave the best milk yield and highest protein levels.
- The new Teagasc bred variety MILLENNIUM scored particularly well in the trials at Moorepark. MILLENNIUM produced more grass and the top milk yields in the two years of trials together with the highest milk protein yield. MILLENNIUM is included in all the Diamond Lea mixtures.
- MILLENNIUM is a tetraploid late perennial ryegrass and is an ideal companion for the leafy pasture type perennials such as Cornwall and Umbria.
- All Diamond Lea Mixtures contain the new high yielding Teagasc bred varieties of white clover.
- Acknowledgment to Teagasc experts for their advice in drawing up these mixtures.

MILLENNIUM GOLD

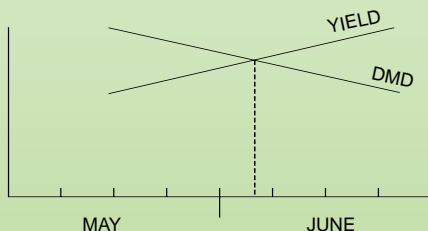

Quality Silage & Intensive Grazing

3.15 kg UMBRIA PRG
3.18 kg CORNWALL PRG
2.27 kg MILLENNIUM (T) PRG
1.35 kg CASHEL PRG
1.35 kg MAGICIAN (T) PRG
0.45 kg AVOCA WHITE CLOVER

11.75 kg / ac

- Grass varieties designed to give a big bulk of high quality silage at one cutting.
- A high proportion of leafy types to improve quality combined with the more erect intermediate types.
- Will provide early bite if required before closing for silage
- Designed to maintain quality where early grazing may not be possible.

Optimum time to cut 1st cut silage

In the event of a variety not being available, we reserve the right to include the best alternative. The actual mixture will be shown on the label.
